

Computers, phones and tablets

What has been checked, and what has not. Please read this before relying on a phone or tablet.

On a computer (recommended)

Unzip the download, open **02_OFFLINE_PAGE_BUILDER** and double-click **Heritage_Page_Studio_OFFLINE.html**. It opens in your web browser and works without internet. The builder was tested in Chromium (the engine of Chrome and Edge) and in WebKit (the engine family of Safari) on a computer. It was not tested in the Safari, Edge or Firefox apps themselves, so if something looks wrong there, try another browser.

On a phone or tablet

The screenshot shows the Heritage Page Studio interface on a small screen. At the top, there are buttons for "Print or save PDF" and "Undo". Below these is a "Redo" button. A message states: "Unsaved changes. Choose Save my page before closing this tab." Below this is a text prompt: "Next: Write one true sentence about it." The main editing area is titled "Editing Title" and has a "Done" button. It contains the text: "Changes show on the page as you type. Choose Done when you are finished." Below this is a section for "Page title" with a description: "A few words about who or what this page is about. Example: Sunday afternoons at Nana's". A text input field contains the text "Elena's tomato garden". Below the input field is a note: "These words also appear in step 2, so they stay the same everywhere on the page and in the notes." At the bottom, there is a button for "Undo changes to this section" and a large "Done" button.

The builder's screens adjust to small screens: steps fill the width, **Edit** and **See my page** switch between the form and the page, and tapping a part opens a large editor across the screen. A finger swipe scrolls the page and never moves a part by accident.

These were checked with a computer imitating phone and tablet screens. **They were not checked on a real phone or tablet.**

Opening a downloaded HTML file on a phone or tablet is the part most likely to fail. Many phones show it as a preview instead of running it, cannot unzip the download, or keep the file somewhere hard to find. Whether you can open the builder, choose a photo, save a page, find it again and print it this way has **not been verified**.

Safest choice: make and save your pages on a computer. You can print the page maps and the workbook from any device, and a printed page or PDF can be read on a phone.

If you try it on a phone anyway

- Save often with **Save my page**, and check that the file appears in your Files or Downloads app before closing the builder.
- Photos: choose a JPG copy. If you see “This is a HEIC photo”, see [TROUBLESHOOTING.pdf](#).
- Printing from a phone depends on the phone and printer. If **Print or save PDF** does nothing, save your page and print it from a computer.
- The Back button closes an open editor first and keeps your typing.
